

## Data Bite # 7 – Residence of Under Grads

### Residence of Undergraduate Students

While most of WT's undergraduate students come from Texas, there is still over 10% that is not from Texas:

State	# Enrolled	Percent of Whole
Texas	6174	90.5%
Colorado	166	2.4%
New Mexico	152	2.2%
Other	330	4.8%

The heat map created for this data bite was done from student address zip codes pulled from Informer (6822 UG students in all). Not pictured is the international students (80) and those without a zip code listed (60 students). The first time in college students are shown in maroon, while remainder of the undergraduate students are in grey. This is to show how many students are far away from home possibly for the first time, as the holidays approach. This is to help bring awareness that a portion of our students may not be able to travel home for Thanksgiving and might be spending the holidays alone.

The choice to limit the map to just the continental US was to make the map easy and quick to digest. The full visualization is below (Tableau did not recognize 394 of the zip codes entered – this could be due to international status not in the program, or entry error at time of application):
